Evaluation: PROVISIONAL quick-mode pilot. Test set = random sample of 1,000 reviews from the official IMDB test split (not the full 25,000); training used 2,000 reviews (500 validation) and at most 2 epochs; one-layer LSTM (128 hidden units).
Selection: Best epoch chosen by validation loss (best epochs observed: 1-2); early stopping patience 2. Seeds: 0, 1, 2.
Source: results_quick/metrics.csv (per run) and results_quick/summary.csv. Precision, recall and positive-class F1 use label 1; threshold = 0.5.

Note: these numbers come from the quick smoke test (tiny training set, 2 epochs) and are NOT final; they will be replaced by the full-run results (25,000 test reviews).
